

## **New Software Integration Allows Berkeley Contract Packaging To Increase Productivity And Lower Costs**

Berkeley Contract Packaging continues to lead the industry by staying abreast of all the latest technological enhancements. As part of this initiative, we have recently installed a new Warehouse Locator System and Planning software at our three locations in New Jersey, Pennsylvania and Illinois. This new software, called MAS 500, is a robust, integrated series of business applications which have allowed Berkeley to improve productivity and efficiency, all while reducing operational costs.

The MAS 500 program provides advanced capabilities for tracking, managing, and replenishing inventory and managing warehouse operations through the entire distribution cycle, from purchasing to stocking, all the way through sales. As a result, we've been able to improve lead time calculations, achieve more accurate material plans (through the Material Requirements Planning module), and better allocate our resources. This gives us a real-time business snapshot, a critical competitive advantage that provides us with the ability to ship more products on time to our customers, and to do so at the most reasonable cost.

Contact us to learn more about how this new software can help you achieve results where they count most... your bottom line.
